[Stone Tools Made By Early Man](#)

Though it's unclear who made the tools, the find is the latest and most convincing in a string of evidence that toolmaking began before any members of the Homo genus walked the Earth. Related Content That's the conclusion of an analysis today in Nature of the oldest stone tools yet discovered. Up until now, the earliest clear evidence of stone tools came from a 2.6-million-year-old site in Ethiopia.

“This discovery challenges the idea that the main characters that make us human—making stone tools, eating more meat, maybe using language—all evolved at once in a punctuated way, near the origins of the genus Homo,” says, a paleoanthropologist at Rutgers University and co-author of the study.

the early stone age tools are made of

the early stone age tools are made of, what were early stone tools made of, which tools were made with stone by early man, stone tools made by early humans, why were the tools of early human beings made from stone, what were stone age tools made of, what kind of tools did they use in the stone age, what tools did they use in the stone age, what did early humans use stone tools for, what were stone tools used for by early humans, when did humans start using stone tools

Unearthed in a dried-up riverbed in Kenya, the shards of scarred rock, including what appear to be early hammers and cutting instruments, predate the previous record holder by around 700,000 years.
